

6. A cabin has a 0.159 m thick wooden floor [ $k = 0.141 \text{ W}/(\text{m } ^\circ\text{C})$ ] with an area of  $13.4 \text{ m}^2$ . A roaring fire keeps the interior of the cabin at a comfortable  $18.0 \text{ }^\circ\text{C}$  while the air temperature in the crawl space below the cabin is  $-20.6 \text{ }^\circ\text{C}$ . What is the rate of heat conduction through the wooden floor?
- A. 245 J/s
  - B. 459 J/s
  - C. 31 J/s
  - D. 138 J/s
  - E. 214 J/s
7. An ideal monatomic gas absorbs 750 J of heat as it performs 625 J of work. What is the resulting change in temperature if there are 1.3 moles of the gas?
- A. 7.7 K
  - B.  $-4.3 \text{ K}$
  - C.  $-8.6 \text{ K}$
  - D. 9.6 K
  - E. 23 K
8. Which one of the following is *not* an example of convection?
- A. An electric heater warms a room.
  - B. An eagle soars on an updraft of wind.
  - C. Smoke rises above a fire.
  - D. Water cooks spaghetti.
  - E. A person gets a suntan on a beach.
9. A 0.20-kg lead shot is heated to  $90.0 \text{ }^\circ\text{C}$  and dropped into a beaker with 0.50 kg of water initially at  $20.0 \text{ }^\circ\text{C}$ . What is the final equilibrium temperature of the lead shot? The specific heat capacity of lead is  $128 \text{ J}/(\text{kg } ^\circ\text{C})$ ; and the specific heat of water is  $4186 \text{ J}/(\text{kg } ^\circ\text{C})$ . Assume the beaker is insulated so that no heat is lost to the room.
- A.  $42.1 \text{ }^\circ\text{C}$
  - B.  $22.4 \text{ }^\circ\text{C}$
  - C.  $27.8 \text{ }^\circ\text{C}$
  - D.  $4.8 \text{ }^\circ\text{C}$
  - E.  $20.8 \text{ }^\circ\text{C}$

10. What are the SI units of the product of pressure and volume,  $PV$ ?
- A. joule
  - B. newton second
  - C. newton
  - D. meter<sup>2</sup>
  - E. kilogram meter/second
11. A string is wrapped around a pulley of radius 0.10 m and moment of inertia 0.15 kg m<sup>2</sup>. The string is pulled with a force of 12 N. What is the magnitude of the resulting angular acceleration of the pulley?
- A. 0.055 rad/s<sup>2</sup>
  - B. 0.13 rad/s<sup>2</sup>
  - C. 80 rad/s<sup>2</sup>
  - D. 8.0 rad/s<sup>2</sup>
  - E. 18 rad/s<sup>2</sup>
12. How many molecules are in 0.064 kg of sulfur dioxide, SO<sub>2</sub>? (atomic masses: S = 32 g/mol; O = 16 g/mol)
- A. 2.00 x 10<sup>24</sup>
  - B. 3
  - C. 64
  - D. 6.02 x 10<sup>23</sup>
  - E. 3.85 x 10<sup>25</sup>

13. Two moles of a confined ideal monatomic gas begin at state A in the pressure-volume graph and follow the path shown to state D. If the temperature of the gas at A is 54 K, what is the temperature of the gas at D?

- A. 54 K  
 B. 46 K  
 C. 60 K  
 D. 78 K  
 E. 32 K
14. A solid sphere rolls without slipping along a horizontal surface. What percentage of its total kinetic energy is rotational kinetic energy about the center of mass? The moment of inertia of a sphere about its center of mass is  $(2/5)mr^2$ .
- A. 75 %  
 B. 50 %  
 C. 33 %  
 D. 12 %  
 E. 29 %

An 80-kg man balances the boy on a teeter-totter as shown. **Note: Ignore the weight of the board.**

15. What is the approximate mass of the boy?

- A. 50 kg
- B. 45 kg
- C. 20 kg
- D. 40 kg
- E. 10 kg

16. A child standing on the edge of a freely spinning merry-go-round moves quickly to the center. Which one of the following statements is necessarily true concerning this event and why?

- A. The angular speed of the system decreases because the moment of inertia of the system has decreased.
- B. The angular speed of the system decreases because the moment of inertia of the system has increased.
- C. The angular speed of the system increases because the moment of inertia of the system has increased.
- D. The angular speed of the system increases because the moment of inertia of the system has decreased.
- E. The angular speed of the system remains the same because the net torque on the merry-go-round is zero.

17. A metal rod 40.0000 cm long at 40 °C is heated to 60 °C. The length of the rod is then measured to be 40.0105 cm. What is the coefficient of linear expansion of the metal?

- A.  $44 \times 10^{-6}/\text{C}^\circ$
- B.  $53 \times 10^{-6}/\text{C}^\circ$
- C.  $22 \times 10^{-6}/\text{C}^\circ$
- D.  $71 \times 10^{-6}/\text{C}^\circ$
- E.  $13 \times 10^{-6}/\text{C}^\circ$

18. Calculate the rms speed of a monatomic ideal gas of temperature  $5.00\text{ }^{\circ}\text{C}$ . The molecular weight of the gas is  $32\text{ g/mole}$ .
- A.  $465\text{ m/s}$
  - B.  $328\text{ m/s}$
  - C.  $86.3\text{ m/s}$
  - D.  $62.0\text{ m/s}$
  - E.  $487\text{ m/s}$
19. A person steps out of the shower and dries off. The person's skin with an emissivity of  $0.70$  has a total area of  $1.2\text{ m}^2$  and a temperature of  $33\text{ }^{\circ}\text{C}$ . What is the net rate at which energy is lost to the room through radiation by the naked person if the room temperature is  $24\text{ }^{\circ}\text{C}$ ?
- A.  $25\text{ W}$
  - B.  $47\text{ W}$
  - C.  $81\text{ W}$
  - D.  $67\text{ W}$
  - E.  $0.041\text{ W}$
20. A fixed amount of ideal gas is compressed isothermally. Which entry in the table below correctly depicts the sign of the work done, the change in the internal energy, and the heat exchanged with the environment?
- |                             | <i>work done</i> | <i>change in internal energy</i> | <i>heat exchanged</i> |
|-----------------------------|------------------|----------------------------------|-----------------------|
| <input type="checkbox"/> A. | negative         | zero                             | negative              |
| <input type="checkbox"/> B. | negative         | negative                         | zero                  |
| <input type="checkbox"/> C. | negative         | zero                             | positive              |
| <input type="checkbox"/> D. | positive         | zero                             | positive              |
| <input type="checkbox"/> E. | positive         | negative                         | zero                  |
21. Argon gas at  $305\text{ K}$  is confined within a constant volume at a pressure  $P_1$ . If the gas has a pressure  $P_2$  when it is cooled to  $195\text{ K}$ , what is the ratio of  $P_2$  to  $P_1$ ?
- A.  $1.28$
  - B.  $0.717$
  - C.  $0.410$
  - D.  $0.639$
  - E.  $1.56$

22. A thermos bottle contains 3.0 kg of water and 2.0 kg of ice in thermal equilibrium at 0 °C. How much heat is required to bring the system to thermal equilibrium at 50 °C? The latent heat of vaporization is  $22.6 \times 10^5$  J/kg and the latent heat of fusion is  $33.5 \times 10^4$  J/kg.
- A.  $1.3 \times 10^6$  J
  - B.  $1.7 \times 10^6$  J
  - C.  $2.3 \times 10^6$  J
  - D.  $1.0 \times 10^6$  J
  - E.  $1.1 \times 10^7$  J
23. Which object will emit more electromagnetic radiation than it absorbs from its surroundings?
- A. a 200 °C copper coin in a beaker of water at 98 °C
  - B. a girl scout sitting close to a campfire
  - C. an ice cube in thermal equilibrium with the interior of a freezer
  - D. a 600 °C lead sphere in a 700 °C oven
  - E. an ice cube in beaker of water at 50 °C
24. Three thermometers are placed in a closed insulated box and are allowed to reach thermal equilibrium. One is calibrated in Fahrenheit degrees, one in Celsius degrees, and one in Kelvins. The Celsius thermometer reads -40 °C and the Kelvin thermometer reads 233 K. Which one of the following statements is necessarily true?
- A. The Kelvin thermometer should read -233 K.
  - B. The Fahrenheit thermometer must read -40 °F.
  - C. If the temperature of the contents is increased by 10 C°, the reading on the Kelvin thermometer should increase by 273 K.
  - D. The Kelvin thermometer should read -313 K.
  - E. If water were found within the box, it must be in the liquid state.
25. A spinning skater draws in her outstretched arms thereby *reducing* her moment of inertia by a factor of 2. Determine the ratio of her final kinetic energy to her initial kinetic energy.
- A. 0.5
  - B. 1
  - C. 2
  - D. 4
  - E. 16
